Faculty of Livestock, Fisheries and Nutrition

PROSPECTUS

Food Production & Technology Management

Food Science & Nutrition

Wayamba University of Sri Lanka

Why Studying Food Production and Technology & Food Science and Nutrition

Food and nutrition is the corner stone of a healthy and active society. Since there is a direct link between diet and health, general public is becoming more nutrition conscious and are demanding higher quality foods that maintain health and prevent disease, On the other hand the government has targeted the food sector as being of great strategic importance, capable of generating considerably more -wealth and employment. Therefore this Science and Nutrition degree program has been /eloped to meet these needs among general public, the food and related industries academic and research organizations,

government and non government agencies.

The degree program will qualify graduates to fit into programs related to human nutrition or careers in food and related industries in Sri Lanka and abroad. The training in livestock and aquaculture both area of rapid growth in Sri Lanka and abroad will further enhance the employment prospects of graduates, recent surveys of manpower requirement in these

sectors have highlighted the urgent need of properly trained people. Therefore our graduates are high in demand for the careers in production management, quality assurance, quality control, consultancy, program planning, research, product /development, extension, marketing, etc. A higher than average proportion of undergraduates finds the employment they want upon graduation and progress into rewarding careers, in management, quality assurance, quality control, consultancy, program planning, research, product

Faculty of Livestock Fisheries and Nutrition

Established as a new faculty in Wayamba University of Sri Lanka on 17th August 2007, the Faculty of Livestock, Fisheries and Nutrition is the pioneer of its kind in the South Asia, where a full fledged degree program is carried out, largely focused on Food and Nutrition. Though the faculty is young in age, it processes the potential and capacity, so that it guarantees the best higher education that any local university would offer in the relevant stream.

The faculty comprises of four departments which are majoring four immerging areas in Scientific studies' have a greater demand in both local and international job market. The departments are namely The Department of Food Science and Technology, the Department of Applied Nutrition, the Department of Aquaculture and Fisheries and the Department of Livestock and Avian Sciences.

Led by well qualified, trained and experienced staff, the course modules are collectively aimed at giving you a well balanced knowledge on each specializing area that would prepare yourself to be an outstanding contestant in the job

market. It further widens the spectrum of opportunities that you would choose to continue with your dream profession or further higher studies.

Easy access to the worldwide

online knowledge via fate IT

unit keeps you aligned with the latest knowledge updates while the university's library provides you a great archive of knowledge: available at hand all the time.

Laboratories armed with most

About Us!

Wayambais a major contributor to thr GNP of Sri Lanka. Wayamba Province, a part of the coconut triangle, is the main supplier of coconut export of the nation. Poultry and milk production is mainly centered in Wayamba province and thereby 2/3 of the total livestock production is generated in the Wavamba province. The western coast of the Wayamba province ie endowed with rich fisheries and other aquatic resources. Kalpitiya, Chilaw and Puttalum areas are a hive of fisheries activities. Also

Wayamba takes pride in being the outstanding province foe prawn culture with 90% of total aquaculture production of the country.

The many industies in the wayamba province have given birth to a number of food processing and production centers. Coconut processing, seafood processing, prawn processing and milk production and industries of related products are prominent among them.

Our Vision and Mission

Achieve excellence and recognition in higher education, research and developing technologies in its mandated areas.

Produce graduate with knowledge skills and competence to meet urgent National needs in the important field of food and nutrition with a special emphasis on livestock and fisheries sector and to develop research and outreach

Dean's Message

The government of Sri Lanka recognizing the emerging needs of the food and nutrition sector has established the faculty of Livestock, Fisheries and Nutrition in she Wayamba University of Sri Lanka.

The faculty offers a Four-year special degree program with the option to specialize in Food Science and Technology, Nutrition, Aquaculture and Fisheries and Livestock arid Avian Sciences. The curriculum focused or both theoretical and practical aspects of food and nutrition sector and help to develop management administrative

design and planning research and investigation communication and interpersonal skills of toe graduates for competitive advantage in entry to world of work and for the development of own enterprenuency

The food science and nutrition degree give you a great choice for you to be employed in government and private sector institutions in capacities such as administrative management research, academic, consultancy and advisory and policy making.

Vice Chancellor's Message Wayamba University of Sri Lanka

Wayamba University of Sri Lanka was established in 1999 and this marked the commencement of the faculty of Livestock, Fisheries and Nutribon and the new degree program in Food Science and Nutution. I am extremely delighted to see that a dream many of us cherished for years finally being realized with the establishment of the faculty. However great institutes of learning cannot be created overnight, they need careful nurturing, constarlt support, visionary leadership and commtted staff. I see these conditions are

fulfilled to a great extent for the Faculty to grow and to be established as a Centre of Excellence. This faculty student population is diverse and comprises of youth from all districts of the island. The strong commitment and constant effort by the staff to improve its curriculum and smooth delivery of its so established vigorous and innovative curriculum should be appreciated. The students at the faculty are inspired and challenged to achieve their academic aspirations by highly qualified academic staff with a substantial industrial and research experience. The faculty has developed many links with industry and state sector Research Institutes which in turn help the faculty to design and develop related courses and appropriate

The Department of Food Science and Nutrition

The Department of Food Science and Technology works with the mission of contributing to the society through the pursuit of education in food science, food technology, food quality & safety and all allied sciences in learning. development of skills, synthesizing, application and dissemination of knowledge and meeting international standards in research and teaching at the highest levels of excellence.

Our comprehensive undergraduate programs prepare the students in a wide range of carrier opportunities in the food industry, food services establishments, academia, and government sector through skill development in communication,

marketing, entrepreneurship and project management aiming in uplifting the country's food sector.

Dr. (Ms) S. Javathilake Senior Lecturer B.Sc. Agric. (Peradeniya, SL), M.Sc. / Peradeniva. SLI, Ph.D./Obihiro.

Ms. RAC Hailu Seneviratne Lecturer (Probationary) B.Sc. in Food Science and TechnologyM.Phil. (Reading)(Peradeniya, Sri B.Sc. Ágri (Specialization in Food Science & Technology) (Peradeniya, Sri Lanka)

The Department of Aquaculture and Fisheries

The Department of Aquaculture and Fisheries aims to develop among students both basic and applied science skills through practical-based instruction. Most educational modules are conducted in laboratories and department aquaculture farms. In addition to the in-house teaching and learning process, the department facilitates numerous field visits and outbound training, allowing students to master different experimental works. The curriculum also exposes them to real-world experiences, including a guided cruise tour for actual sea experience.

Students specializing in Aquaculture undergo a special training in the industry during their final year. This provides them the proper hands-on experience to perform well in the industry after the graduation. They are

also trained for product development, invention, innovation as well as proper dissemination of findings both nationally and internationally. The students are actively engaged in various social and outreach activities with the leading support of Aquatic Resources Explores Society (AqRES) and alumni of the department.

Course modules conducted by the department of aquaculture are designed to be target-oriented towards the demands of the industry. Our students are known to be communicative, confident and are generally equipped with qualities that employers look out for. The department's strong tie-ups with corporate in the area also give students the edge to secure their dream job upon graduation.

Join hands with us.

The Department of Livestock and Avian Sceinces

The demand for livestock products has increased dramatically in recent years and this trend is expected to continue in next two decades. The need for qualified personnel not so much in primary farm level production but in the post harvest handling and processing of milk and meat is how felt an urgent need. The courses given by this department will complement in food production and technology

management and enable them

knowledge in foods as well as

to obtain a specialized

other products origination from domestic animals.

Being the super educational institutional institute located in the area, considered as heart of the livestock production in Sri Lanka, it is our aim to provide high quality educational programmes and experiences, and expellant scholarship and services

to the community focused on livestock production and their products. Department provides the opportunity to obtain a meaningful Bachelor of Food Science and Nutrition degree that will serve the individual and the country well in years to come.

The Department of Applied **Nutrition**

The Department of Applied Nutrition is the first and the only academic Department in Sri Lankan state university system in Human Nutrition. It is one of the pioneering contributors for the B.Sc. in Food

Science and Nutrition degree offered by the faculty. The Department makes the Food

Science and Nutrition graduates of Wayamba University distinctive from other food science graduates in the country by imparting intellectually demanding competency in nutrition. Nutritional sciences integrates the principles of biology, chemistry and social sciences to

interpret the complex relationship of diet to human health at basic to applied level ranging from

molecular and cellular nutrition. nutritional biochemistry to public health nutrition. The curricula

encompasses essential skills and competency in clinical nutrition and dietetics and public health and community nutrition. The graduates with Applied Nutrition specialization are community development. Complemented the pride of producing qualified dietitians settinas.

qualified to be nutritionists and employed by government and private sector in food industry, health care, education, research and with further study and training. specialization in applied nutrition is the shortest pathway to become a registered dietitian in Sri Lanka. The Department holds who successfully practice in both local and foreign clinical

The unique mission of the Department further extends to the improvement of nutrition and health status of the population in Sri Lanka not only via excellence in nutrition teaching and research, but also by training, community work and outreach activities. Moreover, the Department of Applied Nutrition provides technical guidance and consultations for the food and neutraceutical industry and local and international public and private sector organizations as a responsible partner in human nutrition of the local, regional and international communities.

How you will be taught?

You will follow a four year special degree program, which consists of eight semesters, in the first two years of degree program you will be offered a common foundation program which will introduce you the

fundamentals and will cover a general but wide area of course related sciences. During the latter two years, whilst following some compulsory courses in food and nutrition, you can specialize in one of four study areas namely food science and technology applied nutrition aguaculture and fisheries and livestock and avian sciences. A research project and industrial training in the area of specialization is included as part of the study program.

Marketing, Accountancy and Statistics as well as shared courses such as Fish biology, Breeding and Reproduction, Microbiology and Physiology. The courses given in the latter

two years will be of a more applied nature, which together with he course in Industrial Training will enable you to learn to fit into a job environment.

The medium of course conduct

will be English. This would be a great advantage in the competitive job market, The academic program not solely aimed at acquiring subject related knowledge. Apart from ithis:, it is designed to identify and develop true potentials and soft skills of undergraduates. This: includes, development of leadership skills, interpersonal skills, analytical ;kills, decision making skills, advanced writing skills, presentation skills, etc.

^ number of modules are offered incorporated with IT and computer related applications and lands on training on analytical software packages ensuring the degree program offered by the University is head to head with modern trends. This would credit the

OUR FACILITIES

Fully fledged Interactive Lecture Theaters

Our modern lecture theaters are arranged in a manner that will enable you to interact effciently with the lecturer as well as your colleagues. This arrangement brings about the true aspects of student centered learning. All the lecture theaters

are equipped
with multimedia
and e-learning
facilities to
ensure an
effective
learning
process of high
standards.

OUR FACILITIES

Well-Equipped Laboratories

Our well-equipped series of laboratories enable you to obtain a first hand practical exposure in subject areas. Also the required facilities are there to support your researches.

Biostatistics & Agronomy Unit

Biostatistics Unit was established as a part of the Faculty of Livestock Fisheries & Nutrition in the year 2013. The unit caters to students from both B. Sc. Food Science & Nutrition and Food Production & Technology Management degree programmes offering basic as well as advanced course modules related to Statistics, Mathematics & Agronomy. These course modules provide knowledge on fundamental principles & enable students to develop their analytical skills in statistics and mathematics. Biostatistics Unit is also offering course modules to cover the basic scientific principles of agriculture & amp; agronomical aspects with the view of increasing food production and food security.

Students from both degree programmes who wish to gain sound experience on statistical applications in food production systems, processes & technology have opportunities to conduct their research in Biostatistics & Agronomy in collaboration with other departments in the faculty as well as with recognized outside institutions. The unit also offers services/course modules/workshops on experimental design & planning to help students at

the final year for successful planning, implementing & completing their undergraduate research projects.

Currently the main research and development efforts in the Biostatistics unit is in collaboration with outside institutions & the departments of the faculty on Pattern Recognition & Image Processing for complex biological processes using Artificial Neural Networks, Trend Analysis in different food production systems, investigating the potential impacts of climate change on national food security & implications of environmental pollution on human health.
